

Village of Pingree Grove

Fence Installation

For the purpose of proper drainage and maintenance within the Municipal Utility Easement (M.U.E) on your plat of survey. Please note the follow instructions to avoid any issues with the installation of fences within the municipal utility easement.

All wood fences need a clearance of 3" from the ground in drainage areas.
This is to ensure all yards drain properly during heavy rainstorms.

No storm structure shall be blocked and will need to be accessible
Fences built on top of storm structure shall have a removable panel or gate to allow Village personal access inside.

No fencing shall be permitted on Village landscape slopes or berm
This is to maintain the natural landscape beauty along Roadways and for landscape maintenance crews.

Any fence built on municipal utility easements may be removed for utility access and restored at no additional cost to the village.
This includes any storage sheds, trees, shrubs or equipment.

Fences built in the municipal utility easement may need to be modified to accommodate storm run off and proper drainage.
